Dr. Jake Gunther was born, learned to climb trees and eat bananas at a young age, survived numerous accidents, and managed to live into adulthood. The only bone he has ever broken is his right thumb (broken twice). In 2011 he accomplished one of his long-term goals by learning to ride a unicycle. His next goal is learning to do giants on the high bar that he plans to build this summer in his back yard.

Dr. Gunther does research in signal processing, communication systems and machine learning.
